

Pope Elementary Remodel and Expansion

Remodel and expand Pope Elementary as a 44 home room classroom elementary. The building expansion will entail classrooms east of the existing building and a new gym/cafeteria on the north end. The proposed work will include; construction of an addition and modernization of the existing building (approximately 110,000 square feet total construction), selective demolition of existing structures, removal of portables, relocation of some play areas, expansion of the bus loop and parking areas. The design will accommodate all day kindergarten and special education pre-school. This project envisions moving Pope students to an interim site, perhaps the existing Firgrove Elementary, during construction.

Estimated cost: \$31,867,894
